Blood Group & RH Factor

SPECIMEN	WHOLE BLOOD
ABO GROUP	B
RH FACTOR	POSITIVE
INTERPRETATION	

The ABO system consists of A, B, AB, and O blood types. People with type AB blood are called universal recipients, because they can receive any of the ABO types. People with type O blood are called universal donors, because they can donate blood to all people with any of the ABO types.

Mismatches with the ABO and Rh blood type can be very serious. The most serious, sometimes life-threatening, transfusion reactions. But these types of reactions are rare.

Rh system

The Rh system classifies blood as Rh positive or Rh negative based on the presence or absence of Rh and does not depend on ABO. People with Rh positive blood can receive Rh positive blood. People with Rh negative blood can receive Rh negative blood. If they receive Rh positive blood, antibodies will be formed against mismatched Rh blood types called Rh sensitization.

THYROID FUNCTION TEST

Triiodo L-Thyronine (T3 Total), Serum **1.31** **pg/dL** **0.30-0.42**

Clinical Significance

Thyroid function tests are used to measure the amount of thyroid hormone in the blood. They are used to diagnose and monitor thyroid disease. The most common thyroid disease is hypothyroidism, which occurs when the thyroid gland does not produce enough thyroid hormone. The other common thyroid disease is hyperthyroidism, which occurs when the thyroid gland produces too much thyroid hormone.

Thyroxine (T4), Serum **1.87** **ug/dL**

Clinical Significance

Thyroxine (T4) is a thyroid hormone. It is produced by the thyroid gland and is used by the body to regulate metabolism. Low levels of T4 can indicate hypothyroidism, while high levels can indicate hyperthyroidism. T4 levels are often measured along with T3 levels to help diagnose and monitor thyroid disease.

Thyroid Stimulating Hormone (TSH), Serum **4.26** **uIU/mL** **0.4-4.0**

Clinical Significance

Thyroid Stimulating Hormone (TSH) is a hormone produced by the pituitary gland. It stimulates the thyroid gland to produce thyroid hormones. High levels of TSH indicate hypothyroidism, while low levels indicate hyperthyroidism. TSH levels are often measured along with T3 and T4 levels to help diagnose and monitor thyroid disease.
