Mediwheel
...Your wellness partner

011-41195959

Dear **Blossoms Hospital,**

We regret to state that following request for Health check up appointment has been Re Scheduled by you. Please let us know if request had not been Re Schedule from your end. We will ask the user to make a fresh request for the same.

Hospital Package Name : Mediwheel Full Body Annual Plus Above 50 Male

Patient Package Name : MediWheel Full Body Health Checkup Male 40 To 50

Package Code : PKG10000367

Member Information		
Booked Member Name	Age	Gender
✓ PRAVESH KUMAR YADAV	40 year	Male ✓

Contact Details : 7351800123

Email : 504545@unionbankofindia.bank

Booking Date : 29-01-2024

Appointment Date : 10-02-2024

Booking Status : Booking ReSchedule

Preferred Time : 10:00 AM

Please login to your account to confirm the same. Also you mail us for confirmation.

Thanks,
Mediwheel Team

Test Name	Value	Unit	Biological Ref Interval
			2 - 6 Yrs : 0.54 - 4.53 7 - 11Yrs : 0.66 - 4.14 12 - 19 Yrs : 0.53 - 3.59

The new recommendations for TSH levels during pregnancy are the following:

First trimester: less than 2.5 with a range of 0.1-2.5.

Second trimester: 0.2-3.0

Note : TSH levels are subject to circadian variation, reaching peak levels between 2-4 am and at a minimum 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the measured TSH concentrations.

HAEMATOLOGY

GLYCOSYLATED HAEMOGLOBIN (HbA1c)

GLYCOSYLATED HAEMOGLOBIN (HbA1c)	5.07	%	Non Diabetic : <6.00 Good Control : 6.00 - 7.00 Fair Control : 7.00 - 8.00 Poor Control : >8.00
ESTIMATED AVERAGE GLUCOSE (eAG)	98.81	mg/dl	65.00 - 135.00

REMARKS :

In vitro quantitative determination of **HbA1c** in whole blood is utilized in long term monitoring of glycemia. The HbA1c level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 8-12 weeks) and therefore provides much more reliable information for glycemia monitoring than determination of blood glucose or urinary glucose. It is recommended that the determination of **HbA1c** be performed at intervals of 3-6 months during diabetes mellitus therapy. Results of **HbA1c** should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.

Estimated average glucose (eAG) - There is a predictable relationship between HbA1c and eAG. It helps people with diabetes to correlate their A1c to daily glucose monitoring levels. It reflects the average glucose levels in the past 2-3 months. The eAG calculation converts the A1c percentage to

HAEMATOLOGY

BLOOD GROUP (ABO)

'B'

RH TYPING

POSITIVE

The upper agglutination test for grouping has some limitations. It is not a confirmatory method. Before tranfusion of blood, blood group must be checked & confirmed by Blood Bank. For further confirmation Reverse typing card (Dia clon ABO/D) method is suggested.
