Investigations	Result	Biological Reference Range
ESR (WINTROBE METHOD)	14 mm/hr	F 0 - 19 mm/hr
BLOOD GROUP		
ABO GROUP	A	
RH FACTOR	Positive	
HbA1C		
Glyco Hb (HbA1C)	5.1 %	4 - 6 %
Estimated Average Glucose	99.67 mg/dL	mg/dL

Interpretation: 1HbA1C has been endorsed by clinical groups and American Diabetes Association guidelines 2017 for diagnosing diabetes using a cut off point of 6.5%
1. Low glycated haemoglobin in a non diabetic individual are often associated with systemic inflammatory diseases, chronic anaemia (especially severe iron deficiency and haemolytic), chronic renal failure and liver diseases. Clinical correlation suggested.
2. In known diabetic patients, following values can be considered as a tool for monitoring the glycemic control. Excellent control-6-7 %

Investigations	Result	Biological Reference Range
Thyroid Profile		
T3	1.13 ng/dL	0.58 - 1.62 ng/dL (Age 1 - 100)
T4	11.65 ug/dl	5 - 14.5 ug/dl (Age 1 - 100)
TSH	0.97 uIU/ml	0.35 - 5.1 uIU/ml (Age 1 - 100)

Interpretation: Ultra sensitive-thyroidstimulating hormone (TSH) is a highly effective screening assay for thyroid disorders. In patients with an intact pituitary-thyroid axis, sTSH provides a physiologic indicator of the functional level of thyroid hormone activity. Increased sTSH indicates inadequate thyroid hormone, and suppressed s-TSH indicates excess thyroid hormone. Transient s-TSH abnormalities may be found in seriously ill, hospitalized patients, so this is not the ideal test). when the s-TSH result is abnormal, appropriate follow-up tests T4 & free T3 levels should be performed. If TSH is between 5.0 to 10.0 & free T4 & free T3 level are normal then it is considered as subclinical hypothyroidism which should be followed up after 4 weeks & if TSH is > 10 & free T4 & free T3 level are normal then it is considered as overt hypothyroidism. Serum triiodothyronine (T3) levels often are depressed in sick and hospitalized patients, caused in part by the biochemical shift to the production of reverse T3. Therefore, T3 generally is not a reliable predictor of hypothyroidism. However, in a small subset of hypothyroid patients, hyperthyroidism may be caused by overproduction of T3 (T3 toxicosis). To help diagnose and monitor this subgroup, T3 is measured on all specimens with suppressed s-TSH and normal FT4 concentrations. Normal ranges of TSH & thyroid hormones vary according trimester in pregnancy. TSH ref range in Pregnancy Reference range (microIU/ml)
First trimester 0.24 - 2.00
Second trimester 0.43-2.2

USG WHOLE ABDOMEN

Liver is normal in size (14 cm) and shape. Its echogenicity is normal. Margins are smooth and regular. The portal vein and biliary radicals are normal in calibre.

GB is well distended. Wall thickness is normal with echofree lumen. CBD is within normal limits.

Pancreas is normal in size, shape and echo pattern.

Bilateral kidneys are normal in shape, size and echotexture. Corticomedullary differentiation is maintained. No evidence of any calculus or hydronephrosis seen.

Rt. Kidney length: 9.4 cm

Lt. Kidney length: 9.8 cm

Spleen is normal in size and echopattern.

Urinary bladder is normal in shape and size. Lumen appears echofree. Wall thickness is normal.

Uterus is anteverted, normal in size, measuring app 4x2.5x3.0 cm. Myometrial echotexture is homogenous.

Endometrial echoes are 6 mm thick & central. Cervix is normal in size and echotexture.

Bilateral ovaries are normal in size and position.

No obvious adnexal lesion seen.

No free fluid in pouch of Douglas.

No evidence of ascites / pleural effusion.

Visualized bowel loops are normal in course and calibre.

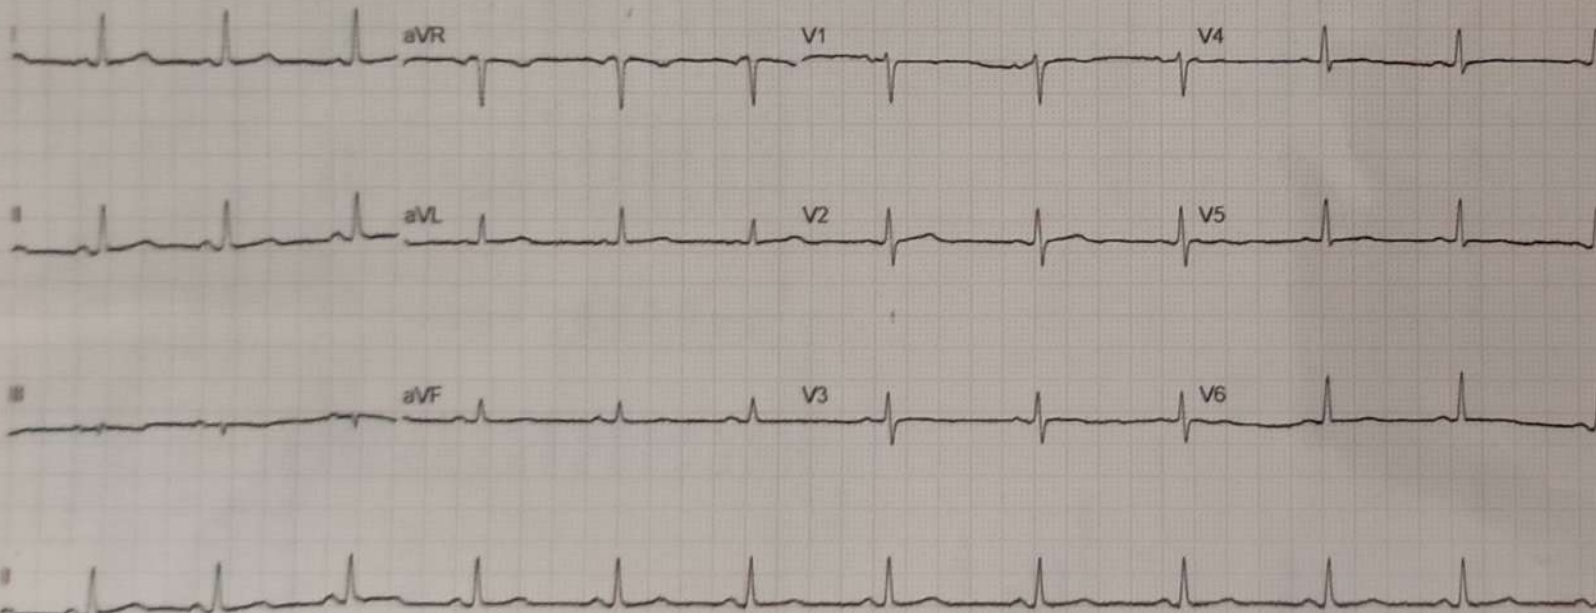

IMPRESSION :-

No significant abnormality detected.
