BLOOD GLUCOSE TEST

Test	Observed Value	Biological Reference Interval
Sample	FLOURIDE ¹ PLASMA	60.0 - 100.0
FASTING (FBS)		
Blood Sugar-F	79 mg/dL	60 - 100
Urine Sugar-F	NIL	
Urine Ketone-F	NIL	
POST PRANDIAL (PPBS)		
Blood Sugar-PP	108 mg/dL	80 - 120
Urine Sugar-PP	NIL	
Urine Ketone-PP	NIL	

HEMOGLOBIN A1c TEST

Test	Observed Value	Biological Reference Interval
HbA1c	5.46 %	> 8.2 : POOR CONTROL 7.2-8.2 : MODERATE CONTROL 6.2-7.2 : GOOD CONTROL < 6.2 : WITHIN NORMAL LIMIT

REMARK

WITHIN NORMAL LIMIT

Importance of HbA1c - Glycated Hb. in Diabetes Mellitus

- HbA1c, also known as Glycated Hemoglobin is the most important test for the assessment of long term blood glucose control (also called glycemic control)
- HbA1c reflects mean blood glucose concentration over past 6-8 weeks and provides a much better indication of long term glycemic control than blood glucose determination
- HbA1c is formed by non-enzymatic reaction between glucose and Hb., this reaction is irreversible and therefore remains unaffected by short term fluctuations in blood glucose levels.
- Long term complications of diabetes such as retinopathy-eye complications, nephropathy-kidney complications and neuropathy-nerve complications, are potentially serious and can lead to blindness, kidney failure etc.
- Glycemic control monitored by HbA1c measurement using HPLC method-(Gold Standard) is considered most important. (Ref. National Glycohemoglobin Standardization Program -NGSP).

THYROID FUNCTION TEST

Test	Observed Value	Biological Reference Interval
T3 - Triiodothyronine	1.06 ng/mL	0.60 - 1.81
T4 - Total Thyroxine	6.89 µg/dL	5.0 - 13.0
TSH	1.18 µIU/mL	0.20 - 6.00

TSH measurement is useful inscreening and diagnosis for euthyroidism, hyperthyroidism and hypothyroidism.

TSH levels may be affected by acute illness and drugs like doapmine and gluco corticoids.

Low or udetactable TSH is suggestive of graves disease.

TSH between .5 to 15.0 with normal T3 T4 indicates impaire thyroid hormone or subclinical hypothyroidism or normal T3 T4 with slightly low TSH suggests subclinical Hyperthyroidism.

TSH Suppression does not reflect severity of hyperthyroidism therefore, measeruemtn of free thyoid is important.

FreeT3 is first hormone to increase in early Hyperthyroidism.

Only TSH level can prove to be misleading in patients on Treatment. Therefor free T3, FreeT4, along with TSH should be checked.
