CLINICAL-BIOCHEMISTRY

<u>Test Name</u>	<u>Observation Unit</u>	<u>Biological Ref.</u>
PSA Prostate Specific Antigen, Serum by CMLA	2.16 ng/ml	0.0-4.0

Remarks:-

Measurement of serum PSA levels is not recommended as a screening procedure for the diagnosis of cancer because elevated PSA levels are also observed in patients with benign prostatic hypertrophy. PSA levels increase in men with cancer of the prostate and after radical prostatectomy PSA levels routinely fall to the undetectable range.

If prostatic tissue remains after surgery or metastasis has occurred, PSA appears to be useful in detecting residual and early recurrence of tumor.

Serial PSA levels can help determine the success of prostatectomy and the need for further treatment, such as radiation, endocrine or chemotherapy and in the monitoring of the effectiveness of therapy.
