INTERPRETATION:

- A lipid profile test measures the different types of lipids in the blood. It measures the levels of four different types of cholesterol and triglycerides.
- LDL (low-density lipoproteins): LDL is the cholesterol that is considered "bad cholesterol" because it forms plaques in the arteries and adversely affects heart health. Thus, LDL cholesterol should be maintained in the lower range.
 - VLDL (very low-density lipoproteins): VLDL appears in the blood soon after we have consumed food. A lipid profile is done as a fasting test, and thus, if there is an increased level of VLDL in the blood sample, it can be suggestive of some metabolic disease.
 - HDL (high-density lipoproteins): HDL cholesterol is also known as "good cholesterol" because it helps clear away the bad LDL cholesterol and prevents its build-up.
 - Total cholesterol: It is the sum of all the different types of cholesterol in your body, i.e., LDL + VLDL + HDL.
 - Triglycerides: Our body converts the excess calories into triglycerides and stores it as body fat. High levels of triglycerides are harmful to the heart, liver, and pancreas.

| LACTATE DEHYDROGENASE (IFCC; L-P) | 200.5 | IU/L | 0 - 248 |

INTERPRETATION:

The LFT test is used to diagnose and monitor liver diseases. It can also provide the information about other health conditions that affect the liver, such as viral or alcoholic hepatitis. If a person is taking medications that can impact on the liver, the test results can indicate whether side effects are occurring.

| URIC ACID (Uricase - Trinder) | | 5.5 | mg/dL | 2.6 - 7.2 |

INTERPRETATION:

High levels of uric acid could be a sign of gout, a condition characterized by inflammation of the joints due to the formation of uric acid crystals. The uric acid level also monitors a person undergoing chemotherapy or radiation treatment for cancer.

| 7.1 - 8.0 | Fair Control |
| <7.0 | Good Control |

- Note:
- 1.A three monthly monitoring is recommended in diabetics.
 2. Since HbA1c concentration represents the integrated values for blood glucose over the preceding 6 - 10 weeks and is not affected by daily glucose fluctuation, exercise and recent food intake, it is a more useful tool for monitoring diabetics.
