PATIENT NAME	MR. CHANDER SHEKHAR DUA	AGE/SEX	53 Y / MALE
REFERRED BY:	SELF	DATE	17.02.2024

USG WHOLE ABDOMEN

LIVER:-Is normal in size measuring 12.5 cm **with increased echogenisity s/o fatty liver**. No focal lesion is seen in the liver parenchyma. IHBR's are not dilated. The PV is normal.

GALL BLADDER: - normal in size and distensibility. The wall thickness is normal. No evidence of any peri-cholecystic collection is seen. No evidence of calculus is seen.

CBD is normal in course and caliber.

PANCREAS:-Head and proximal body of pancreas are normal in outline and echotexture. Rest of the pancreas obscured by bowel shadows.

SPLEEN: - is normal in size measuring 9.4 cm and echotexture. No focal lesion is seen.

RIGHT KIDNEY:-It is normal in size measuring 10.7 x 5.3 cm, normal in position and echotexture. CMD is maintained. The pelvi-calyceal system is compact. No evidence of calculus or hydronephrosis is seen.

LEFT KIDNEY:-It is normal in size measuring 10.5 x 5.5 cm, normal in position and echotexture. CMD is maintained. The pelvi-calyceal system is compact. No evidence of calculus or hydronephrosis is seen.

URINARY BLADDER:-Is minimally distended.

PROSTATE: - is normal in size, having an approximate volume of 19.5 cc. Echotexture is normal.

No free fluid is seen in abdomen and pelvis.

No evidence of any mesenteric lymphadenopathy noted.

Visualized bowel loops appear unremarkable.

A midline anterior abdominal wall defect measuring approx. 16.8 mm is seen at the level of umbilicus, through which pre-peritoneal fat is seen to herniate.

IMPRESSION:

- > **FATTY LIVER GRADE I.**
- > **UMBILICAL HERNIA AS DESCRIBED.**

Please Correlate Clinically.

Test Report

Test Name	Results	Units	Bio. Ref. Interval
HbA1c (GLYCOSYLATED HEMOGLOBIN), BLOOD (HPLC)			
HbA1c	5.6	%	4.00 - 5.60
Estimated average glucose (eAG)	114	mg/dL	

Interpretation

HbA1c result is suggestive of non diabetic adults (>=18 years)/ well controlled Diabetes in a known Diabetic

Interpretation as per American Diabetes Association (ADA) Guidelines

Reference Group	Non diabetic adults >=18 years	At risk (Prediabetes)	Diagnosing Diabetes	Therapeutic goals for glycemic control
HbA1c in %	4.0-5.6	5.7-6.4	>= 6.5	<7.0

Note: Presence of Hemoglobin variants and/or conditions that affect red cell turnover must be considered, particularly when the HbA1C result does not correlate with the patient's blood glucose levels.

FACTORS THAT INTERFERE WITH HbA1C MEASUREMENT	FACTORS THAT AFFECT INTERPRETATION OF HbA1C RESULTS
Hemoglobin variants, elevated fetal hemoglobin (HbF) and chemically modified derivatives of hemoglobin (e.g. carbamylated Hb in patients with renal failure) can affect the accuracy of HbA1c measurements	Any condition that shortens erythrocyte survival or decreases mean erythrocyte age (e.g., recovery from acute blood loss, hemolytic anemia, HbSS, HbCC, and HbSC) will falsely lower HbA1c test results regardless of the assay method used. Iron deficiency anemia is associated with higher HbA1c

Test Report

Test Name	Results	Units	Bio. Ref. Interval
THYROID PROFILE,TOTAL, SERUM (ECLIA)			
T3, Total	1.26	ng/mL	0.80 - 2.00
T4, Total	9.81	µg/dL	5.10 - 14.10
TSH	0.83	µIU/mL	0.27 - 4.20

Note

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4.a.m. and at a minimum between 6-10 pm . The variation is of the order of 50% . hence time of the day has influence on the measured serum TSH concentrations.
2. Alteration in concentration of Thyroid hormone binding protein can profoundly affect Total T3 and/or Total T4 levels especially in pregnancy and in patients on steroid therapy.
3. Unbound fraction (Free,T4 /Free,T3) of thyroid hormone is biologically active form and correlate more closely with clinical status of the patient than total T4/T3 concentration
4. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals

Dr. Samrithi Gupta

Test Report

Test Name	Results	Units	Bio. Ref. Interval
PSA (PROSTATE SPECIFIC ANTIGEN), TOTAL, SERUM (CLIA)			
PSA, TOTAL	0.350	ng/mL	<4.00

Note

1. This is a recommended test for detection of prostate cancer along with Digital Rectal Examination (DRE) in males above 50 years of age.
2. False negative / positive results are observed in patients receiving mouse monoclonal antibodies for diagnosis or therapy
3. PSA levels may appear consistently elevated / depressed due to the interference by heterophilic antibodies & nonspecific protein binding
4. Immediate PSA testing following digital rectal examination, ejaculation, prostatic massage, indwelling catheterization, ultrasonography and needle biopsy of prostate is not recommended as they falsely elevate levels
5. PSA values regardless of levels should not be interpreted as absolute evidence of the presence or absence of disease. All values should be correlated with clinical findings and results of other investigations
6. Sites of Non-prostatic PSA production are breast epithelium, salivary glands, peri-urethral & anal glands, cells of male urethra & breast milk
7. Physiological decrease in PSA level by 18% has been observed in hospitalized / sedentary patients either due to supine position or suspended sexual activity
8. The concentration of PSA in a given specimen, determined with assays from different manufacturers, may not be comparable due to differences in assay methods, calibration, and reagent specificity.

Recommended Testing Intervals

- Pre-operatively (Baseline)
- 2-4 days post-operatively
- Prior to discharge from hospital
- Monthly followup if levels are high or show a rising trend

Post Surgery	Frequency of testing
1st year	Every 3 months
2nd year	Every 4 months
3rd year onwards	Every 6 months

Test Report

Test Name	Results	Units	Bio. Ref. Interval
-----------	---------	-------	--------------------

Clinical Use

- An aid in the early detection of Prostate cancer when used in conjunction with Digital rectal examination in males more than 50 years of age and in those with two or more affected first degree relatives.
- Followup and management of Prostate cancer patients
- Detect metastatic or persistent disease in patients following surgical or medical treatment of Prostate cancer

Increased Levels

- Prostate cancer
- Benign Prostatic Hyperplasia
- Prostatitis
- Genitourinary infections
