COMPUTERISED STRESS TEST (TMT)**RESULTS:**

The pre-exercise ECG was normal and there is no significant ST segment change. During peak exercise and recovery there was significant ST segment change seen leads II, III aVF & V5-V6. Patient could exercise for 6 minutes and 18 seconds of the Bruce protocol and achieved a work load of 7.4 Mets.

The patient attained a peak heart rate of 158 beats/minute which is 92 % of the predicted maximum. The exercise was terminated owing to attainment of target heart rate and fatigue. There was no classical angina. Clinically the maximum blood pressure was BP 170/ 90 and there was no S3/S4 gallop in the recovery period.

IMPRESSION:

Stress test is positive for provokable myocardial ischemia.
