ULTRASOUND WHOLE ABDOMEN

LIVER is normal in size (13.0 cm) and echotexture. **A well defined heterogeneous hypoechoic lesion measuring 21 x 18 mm is seen in segment IV of liver (Adv: CECT Triple phase abdomen for further evaluation).** No evidence of IHBR dilation is present.

GALL BLADDER is well distended and lumen is echofree. Wall thickness is normal. No pericholecystic fluid is seen.

SPLEEN is normal in size and echotexture. No focal lesion is seen.

Visualized pancreatic body appear normal in size and echotexture. Rest of the pancreas is obscured by bowel gases.

RIGHT KIDNEY: is normal in size (10.5 x 3.4 cm) and position and outline corticomedullary differentiation is maintained. There is no evidence of any focal lesion / calculus / backpressure changes.

LEFT KIDNEY: is normal in size (9.3 x 4.6 cm) and position and outline corticomedullary differentiation is maintained. There is no evidence of any focal lesion / calculus / backpressure changes.

URINARY BLADDER is well distended and lumen is echofree. Wall thickness is normal. No evidence of any focal lesion.

PROSTATE is mildly enlarged in size and measures 5.0 x 3.2 x 3.1 cm (vol ~ 27 cc). A cyst of size measuring ~ 3.2 mm is seen in midline.

No free fluid is seen in the abdomen

IMPRESSION:

- Well defined heterogeneous hypoechoic lesion in segment IV of liver (Adv: CECT Triple phase abdomen for further evaluation).
- Mild prostatomegaly with tiny prostatic cyst.

Please correlate clinically.
