

## CHANDAN DIAGNOSTIC CENTRE

Name of Company: MediWheel  
Name of Executive: Ashcharya Kumar  
Date of Birth: 28/11/1988  
Sex:  Male / Female  
Height: 178 CMs  
Weight: 80 KGs  
BMI (Body Mass Index): 25.2  
Chest (Expiration / Inspiration) 95 / 98 CMs  
Abdomen: 96 CMs  
Blood Pressure: 129 / 76 mm/Hg  
Pulse: 76 BPM -  Regular / Irregular  
Ident Mark: Mole on Right forearm.  
Any Allergies: No  
Vertigo: No  
Any Medications: No  
Any Surgical History: Post Cholecystectomy status  
Habits of alcoholism/smoking/tobacco: occasionally  
Chief Complaints if any: No  
Lab Investigation Reports: Report attach  
Eye Check up vision & Color vision: Normal  
Left eye: Normal  
Right eye: Normal

## CHANDAN DIAGNOSTIC CENTRE

Near vision: *N16*

Far vision : *6.16*

Dental check up : *Normal*

ENT Check up : *Normal*

Eye Checkup: *Normal*

### Final impression

Certified that I examined..... *Ashcharya Kumar*..... S/o or D/o  
..... is presently in good health and free from any  
cardio-respiratory/communicable ailment, ~~he/she~~ is *fit* / **Unfit** to join any  
organization.

Client Signature :-

**Dr. R.C. ROY**

MBBS., MD. (Radio Diagnosis)  
Reg. No. -26918

.....  
Signature of Medical Examiner

Name & Qualification - Dr. R. C. Roy (MBBS,MD)

## DEPARTMENT OF BIOCHEMISTRY

### MEDIWHEEL BANK OF BARODA MALE ABOVE 40 YRS

Test Name	Result	Unit	Bio. Ref. Interval	Method
-----------	--------	------	--------------------	--------

#### GLUCOSE FASTING, Plasma

Glucose Fasting	101.90	mg/dl	< 100 Normal 100-125 Pre-diabetes ≥ 126 Diabetes	GOD POD
-----------------	--------	-------	--	---------

#### Interpretation:

- Kindly correlate clinically with intake of hypoglycemic agents, drug dosage variations and other drug interactions.
- A negative test result only shows that the person does not have diabetes at the time of testing. It does not mean that the person will never get diabetes in future, which is why an Annual Health Check up is essential.
- I.G.T = Impaired Glucose Tolerance.

**CLINICAL SIGNIFICANCE:-** Glucose is the major source of energy in the body . Lack of insulin or resistance to it section at the cellular level causes diabetes. Therefore, the blood glucose levels are very high. Elevated serum glucose levels are observed in diabetes mellitus and may be associated with pancreatitis, pituitary or thyroid dysfunction and liver disease. Hypoglycaemia occurs most frequently due to over dosage of insulin.

<b>Glucose PP</b> Sample:Plasma After Meal	108.60	mg/dl	<140 Normal 140-199 Pre-diabetes >200 Diabetes	GOD POD
---	--------	-------	--	---------

#### Interpretation:

- Kindly correlate clinically with intake of hypoglycemic agents, drug dosage variations and other drug interactions.
- A negative test result only shows that the person does not have diabetes at the time of testing. It does not mean that the person will never get diabetes in future, which is why an Annual Health Check up is essential.
- I.G.T = Impaired Glucose Tolerance.

#### GLYCOSYLATED HAEMOGLOBIN (HBA1C) , EDTA BLOOD

Glycosylated Haemoglobin (HbA1c)	6.30	% NGSP		HPLC (NGSP)
Glycosylated Haemoglobin (HbA1c)	37.00	mmol/ mol/ IFCC		
Estimated Average Glucose (eAG)	114	mg/dl		

#### Interpretation:

#### NOTE:-

- eAG is directly related to A1c.

## DEPARTMENT OF BIOCHEMISTRY

### MEDIWHEEL BANK OF BARODA MALE ABOVE 40 YRS

Test Name	Result	Unit	Bio. Ref. Interval	Method
-----------	--------	------	--------------------	--------

- An A1c of 7% -the goal for most people with diabetes-is the equivalent of an eAG of 154 mg/dl.
- eAG may help facilitate a better understanding of actual daily control helping you and your health care provider to make necessary changes to your diet and physical activity to improve overall diabetes management.

The following ranges may be used for interpretation of results. However, factors such as duration of diabetes, adherence to therapy and the age of the patient should also be considered in assessing the degree of blood glucose control.

Haemoglobin A1C (%)NGSP	mmol/mol / IFCC Unit	eAG (mg/dl)	Degree of Glucose Control Unit
> 8	>63.9	>183	Action Suggested*
7-8	53.0 -63.9	154-183	Fair Control
< 7	<63.9	<154	Goal**
6-7	42.1 -63.9	126-154	Near-normal glycemia
< 6%	<42.1	<126	Non-diabetic level

\*High risk of developing long term complications such as Retinopathy, Nephropathy, Neuropathy, Cardiopathy, etc.

\*\*Some danger of hypoglycemic reaction in Type 1diabetics. Some glucose intolerant individuals and "subclinical" diabetics may demonstrate HbA1C levels in this area.

N.B. : Test carried out on Automated VARIANT II TURBO HPLC Analyser.

#### Clinical Implications:

\*Values are frequently increased in persons with poorly controlled or newly diagnosed diabetes.

\*With optimal control, the HbA 1c moves toward normal levels.

\*A diabetic patient who recently comes under good control may still show higher concentrations of glycosylated hemoglobin. This level declines gradually over several months as nearly normal glycosylated \*Increases in glycosylated hemoglobin occur in the following non-diabetic conditions: a. Iron-deficiency anemia b. Splenectomy c. Alcohol toxicity d. Lead toxicity

\*Decreases in A 1c occur in the following non-diabetic conditions: a. Hemolytic anemia b. chronic blood loss

\*Pregnancy d. chronic renal failure. Interfering Factors:

\*Presence of Hb F and H causes falsely elevated values. 2. Presence of Hb S, C, E, D, G, and Lepore (autosomal recessive mutation resulting in a hemoglobinopathy) causes falsely decreased values.

**BUN (Blood Urea Nitrogen)**

## DEPARTMENT OF BIOCHEMISTRY

### MEDIWHEEL BANK OF BARODA MALE ABOVE 40 YRS

Test Name	Result	Unit	Bio. Ref. Interval	Method
-----------	--------	------	--------------------	--------

#### Interpretation:

**Note: Elevated BUN levels can be seen in the following:**

High-protein diet, Dehydration, Aging, Certain medications, Burns, Gastrointestinal (GI) bleeding.

**Low BUN levels can be seen in the following:**

Low-protein diet, overhydration, Liver disease.

<b>Creatinine</b>	1.00	mg/dl	0.7-1.30	MODIFIED JAFFES
<i>Sample: Serum</i>				

#### Interpretation:

The significance of single creatinine value must be interpreted in light of the patients muscle mass. A patient with a greater muscle mass will have a higher creatinine concentration. The trend of serum creatinine concentrations over time is more important than absolute creatinine concentration. Serum creatinine concentrations may increase when an ACE inhibitor (ACE) is taken. The assay could be affected mildly and may result in anomalous values if serum samples have heterophilic antibodies, hemolyzed, icteric or lipemic.

<b>Uric Acid</b>	5.00	mg/dl	3.4-7.0	URICASE
<i>Sample: Serum</i>				

#### Interpretation:

**Note:-**

**Elevated uric acid levels can be seen in the following:**

Drugs, Diet (high-protein diet, alcohol), Chronic kidney disease, Hypertension, Obesity.

## DEPARTMENT OF IMMUNOLOGY

### MEDIWHEEL BANK OF BARODA MALE ABOVE 40 YRS

Test Name	Result	Unit	Bio. Ref. Interval	Method
PSA (Prostate Specific Antigen), Total <i>Sample: Serum</i>	0.41	ng/mL	<4.1	CLIA

#### Interpretation:

1. PSA is detected in the serum of males with normal, benign hypertrophic, and malignant prostate tissue.
2. Measurement of serum PSA levels is not recommended as a screening procedure for the diagnosis of cancer because elevated PSA levels also are observed in patients with benign prostatic hypertrophy. However, studies suggest that the measurement of PSA in conjunction with digital rectal examination (DRE) and ultrasound provide a better method of detecting prostate cancer than DRE alone.
3. PSA levels increase in men with cancer of the prostate, and after radical prostatectomy PSA levels routinely fall to the undetectable range.
4. If prostatic tissue remains after surgery or metastasis has occurred, PSA appears to be useful in detecting residual and early recurrence of tumor.
5. Therefore, serial PSA levels can help determine the success of prostatectomy, and the need for further treatment, such as radiation, endocrine or chemotherapy, and in the monitoring of the effectiveness of therapy.

#### THYROID PROFILE - TOTAL, Serum

T3, Total (tri-iodothyronine)	130.00	ng/dl	84.61-201.7	CLIA

## DEPARTMENT OF IMMUNOLOGY

### MEDIWHEEL BANK OF BARODA MALE ABOVE 40 YRS

Test Name	Result	Unit	Bio. Ref. Interval	Method
-----------	--------	------	--------------------	--------

autoimmune disorders.

- 2) Patients having high T3 and T4 levels but low TSH levels suffer from Grave's disease, toxic adenoma or sub-acute thyroiditis.
- 3) Patients having either low or normal T3 and T4 levels but low TSH values suffer from iodine deficiency or secondary hypothyroidism.
- 4) Patients having high T3 and T4 levels but normal TSH levels may suffer from toxic multinodular goiter. This condition is mostly a symptomatic and may cause transient hyperthyroidism but no persistent symptoms.
- 5) Patients with high or normal T3 and T4 levels and low or normal TSH levels suffer either from T3 toxicosis or T4 toxicosis respectively.
- 6) In patients with non thyroidal illness abnormal test results are not necessarily indicative of thyroidism but may be due to adaptation to the catabolic state and may revert to normal when the patient recovers.
- 7) There are many drugs for eg. Glucocorticoids, Dopamine, Lithium, Iodides, Oral radiographic dyes, etc. which may affect the thyroid function tests.
- 8) Generally when total T3 and total T4 results are indecisive then Free T3 and Free T4 tests are recommended for further confirmation along with TSH levels.

## DEPARTMENT OF ULTRASOUND

### MEDIWHEEL BANK OF BARODA MALE ABOVE 40 YRS

#### ULTRASOUND WHOLE ABDOMEN (UPPER & LOWER)

#### WHOLE ABDOMEN ULTRASONOGRAPHY REPORT

##### LIVER

- Normal in size (**13.0 cm**), shape, & shows diffusely raised echogenicity. Intra & extra hepatic biliary radicals & vascular structures are normal. Margins are smooth and regular

##### GALL BLADDER

- Gb not visualized .(post cholecystectomy status )

##### PORTAL SYSTEM

- Normal in course and caliber (**7.7 mm**).

##### BILIARY SYSTEM

- Visualized part normal in course & caliber (**4.5 mm**).

##### PANCREAS

- Normal in size, shape & echogenicity. Margins are smooth & regular. No diffuse/ focal lesion seen. Pancreatic duct not visualized.

##### KIDNEYS

- Right kidney:- (**9.7 x 4.3 cm**), Left kidney:- (**9.5 x 4.4 cm**).
- Both normal in size, shape echogenicity & position. Cortical-medullary differentiation
- Pelvicalyceal system normal. No evidence of any calculus/mass lesion seen.
- No hydronephrosis/hydroureter seen. No suprarenal mass lesion

##### SPLEEN

- Normal in size ( **11.5 cm**), shape & echogenicity. Margins are smooth & regular. No diffuse / focal lesion seen. Splenic vessels at hilum is normal.

##### URINARY BLADDER

- Normally distended with normal wall thickness. No echogenic foci lumen or diverticula seen.
- Both VUJ appears normal. No evidence of calculus / mass lesion seen.

##### PROSTATE

- Normal in size **3.0 x 3.9 x 2.4 cm, vol 16 gm**, shape & echogenicity.
