**Collection Date :** 20-11-2024 08:24 AM | PATH6015 **Reporting Status :** Finalized  
**Acceptance Date :** 20-11-2024 08:24 AM | TAT: 04:19 [HH:MM]

Investigations	Result	Biological Reference Range
<b>Thyroid Profile</b>		
T3	1.29 ng/dL	0.58 - 1.62 ng/dL (Age 1 - 100 )
T4	8.67 ug/dl	5 - 14.5 ug/dl (Age 1 - 100 )
TSH	3.23 uIU/ml	0.35 - 5.1 uIU/ml (Age 1 - 100 )

Interpretation: Ultra sensitive thyroid stimulating hormone (TSH) is a highly effective screening assay for thyroid disorders. In patients with an intact pituitary-thyroid axis, sTSH provides a physiologic indicator of the functional level of thyroid hormone activity. Increased s-TSH indicates inadequate thyroid hormone, and suppressed s-TSH indicates excess thyroid hormone. Transient s-TSH abnormalities may be found in seriously ill, hospitalized patients, so this is not the ideal setting to assess thyroid function. However, even in these patients, s-TSH works better than total thyroxine (an alternative screening test). When the s-TSH result is abnormal, appropriate follow-up tests T4 & free T3 levels should be performed. If TSH is between 5.0 to 10.0 & free T4 & free T3 level are normal then it is considered as subclinical hypothyroidism which should be followed up after 4 weeks & if TSH is > 10 & free T4 & free T3 level are normal then it is considered as overt hypothyroidism.

Serum triiodothyronine (T3) levels often are depressed in sick and hospitalized patients, caused in part by the biochemical shift to the production of reverse T3. Therefore, T3 generally is not a reliable predictor of hypothyroidism. However, in a small subset of hyperthyroid patients, hyperthyroidism may be caused by overproduction of T3 (T3 toxicosis). To help diagnose and monitor this subgroup, T3 is measured on all specimens with suppressed s-TSH and normal FT4 concentrations.

Normal ranges of TSH & thyroid hormones vary according trimester in pregnancy. TSH ref range in: Pregnancy Reference range (microIU/ml)

First trimester 0.24 - 2.00  
Second trimester 0.43-2.2
