Grey zone values observed in physiological/therapeutic effect.

Note:

T3 :

1. Decreased values of T3 (T4 and TSH normal) have minimal Clinical significance and not recommended for diagnosis of hypothyroidism.
2. Total T3 and T4 values may also be altered in other conditions due to changes in serum proteins or binding sites ,Pregnancy, Drugs (Androgens,Estrogens,O C pills, Phenytoin) etc. In such cases Free T3 and free T4 give corrected Values.
3. Total T3 may decrease by < 25 percent in healthy older individuals

T4 :

1. Total T3 and T4 Values may also be altered in other condition due to changes in serum proteins or binding sites, Pregnancy Drugs (Androgens,Estrogens,O C pills, Phenytoin), Nerphrosis etc. In such cases Free T3 and Free T4 give Corrected values.

TSH :

1. TSH Values may be transiently altered because of non thyroidal illness like severe infections,liver disease, renal and heart failure. Severe burns, trauma and surgery etc.
2. Drugs that decrease TSH values e,g L dopa, Glucocorticoids.
3. Drugs that increase TSH values e.g. Iodine,Lithium, Amiodarone

INTERPERETATION

Serum PSA is a useful diagnostic tool for diagnosis of prostatic cancer. PSA levels should always be assessed in conjunction with the patient's medical history, clinical examination, prostatic acid phosphatase and radiological findings
Elevated levels are indicative of pathologic conditions of prostatitis, Benign hyperplasia or Prostatic adenocarcinoma
Rate of the fall of PSA levels to non detectable levels can occur following radiotherapy, hormonal therapy or radical surgical removal of the prostate & provides information of the success of treatment.
Inflammation or trauma of prostate can lead to elevated PSA levels of varying magnitude and duration.
