### DEPARTMENT OF BIOCHEMISTRY

Test Name	Result	Bio Ref. Interval	Unit
<b>BILIRUBIN (DIRECT) , GEL SERUM</b> (Method:DIAZOTIZATION METHOD)	0.13	<0.2 mg/dL	mg/dL
<b>*BILIRUBIN (TOTAL) , GEL SERUM</b> BILIRUBIN (TOTAL) (Method:JENDRASSIK GROF METHOD)	0.52	0.3-1.2 mg/dL	mg/dL
<b>SODIUM,BLOOD</b> (Method:ISE INDIRECT)	140	136 - 145	mEq/L
<b>CHLORIDE,BLOOD</b> (Method:ISE INDIRECT)	105	98 - 107	mEq/L
<b>CREATININE, BLOOD</b> (Method:ALKALINE PICRATE KINETIC )	0.65	0.5-1.1	mg/dL
<b>PHOSPHORUS-INORGANIC,BLOOD</b> (Method:PHOSPHOMOLYBDATE)	3.4	2.4-5.1 mg/dL	mg/dL
<b>*URIC ACID, URINE, SPOT URINE</b> URIC ACID, SPOT URINE (Method:URICASE)	92.2	37-92 mg/dL	mg/dL
<b>*GLYCATED HAEMOGLOBIN (HBA1C) , EDTA WHOLE BLOOD</b> GLYCATED HEMOGLOBIN (HBA1C)	4.7	<b>***FOR BIOLOGICAL REFERENCE INTERVAL DETAILS , PLEASE REFER TO THE BELOW MENTIONED REMARKS/NOTE WITH ADDITIONAL CLINICAL INFORMATION ***</b>	%
HbA1c (IFCC) (Method:HPLC)	28		mmol/mol

#### Clinical Information and Laboratory clinical interpretation on Biological Reference Interval:

Low risk / Normal / non-diabetic : <5.7% (NGSP) / < 39 mmol/mol (IFCC)  
 Pre-diabetes/High risk of Diabetes : 5.7%- 6.4% (NGSP) / 39 - < 48 mmol/mol (IFCC)  
 Diabetics-HbA1c level : >= 6.5% (NGSP) / > 48 mmol/mol (IFCC)

**Analyzer used : Bio-Rad D 10**  
**Method : HPLC Cation Exchange**

#### HbA1C : DUAL REPORTING OF UNITS <sup>Ref 2,3,4</sup>

Suraksha Diagnostic Pvt. Ltd. has commenced reporting HbA1c in dual units. This is in keeping with current International recommendations to allow a transition phase from current reporting units (%) to the eventual (IFCC) units (mmol/mol). It is anticipated that only IFCC units will be used after 2 years of dual reporting. Please note that the method of analysis has not changed. Although the two results look numerically different, they are clinically equivalent. In defining HbA1C, the unit mmol/mol was determined to be the most accurate description of what is being measured. This will make the measurement more precise and allow for better comparisons of HbA1c results from different laboratories and hospitals throughout the world.

#### Standardization & traceability <sup>Ref 2,3,4</sup>

HbA1c is standardized & traceable to IFCC methods HPLC-CE & HPLC-MS. This new unit (mmol/mol) is used as part of this standardization. This change in HbA1c calibration is to conform to national & international best practice. The initiative will mean that HbA1c is measured specifically & reproducibly. It also enables the use of international reference ranges & harmonization of medical decision or target values.

### DEPARTMENT OF BIOCHEMISTRY

Test Name	Result	Bio Ref. Interval	Unit
-----------	--------	-------------------	------

#### Recommendations for glyceimic targets <sup>Ref 1</sup>

- Ø Patients should use self-monitoring of blood glucose (SMBG) and HbA1c levels to assess glyceimic control.
- Ø The timing and frequency of SMBG should be tailored based on patients individual treatment, needs, and goals.
- Ø Patients should undergo HbA1c testing at least twice a year if they are meeting treatment goals and have stable glyceimic control.
- Ø If a patient changes treatment plans or does not meet his or her glyceimic goals, HbA1c testing should be done quarterly.
- Ø **For most adults who are not pregnant, HbA1c levels should be <7% to help reduce microvascular complications and macrovascular disease . Action suggested >8% as it indicates poor control.**
- Ø Some patients may benefit from HbA1c goals that are more or less stringent.

**Result alterations in the estimation has been established in many circumstances, such as after acute/ chronic blood loss, for example, after surgery, blood transfusions, hemolytic anemia, or high erythrocyte turnover; vitamin B<sub>12</sub>/ folate deficiency, presence of chronic renal or liver disease; after administration of high-dose vitamin E / C; or erythropoietin treatment.**

**FINDINGS :**

No active lung parenchymal lesion is seen.  
Both the hila are normal in size, density and position.  
Mediastinum is central. Trachea is in midline.  
Domes of diaphragm are smoothly outlined. Position is within normal limits.  
Lateral costo-phrenic angles are clear.  
The cardio-thoracic ratio is normal.  
Bony thorax reveals no definite abnormality.

**IMPRESSION :**

Normal study.

**DEPARTMENT OF ULTRASONOGRAPHY**

**ULTRASONOGRAPHY OF WHOLE ABDOMEN**

**LIVER:** Normal in shape, size (13.9 cm) and parenchymal echopattern. No focal lesion of altered echogenicity is seen. Intrahepatic biliary radicles are not dilated. The portal vein branches and hepatic veins are normal.

**GALL BLADDER:** Well distended lumen shows no intraluminal calculus or mass. Wall thickness is normal. No pericholecystic collection or mass formation is noted.

**PORTA HEPATIS:** The portal vein is normal in caliber with clear lumen. The common bile duct is normal in caliber. Visualized lumen is clear. Common bile duct measures approx 0.3 cm in diameter.

**PANCREAS:** It is normal in shape, size and echopattern. Main pancreatic duct is not dilated. No focal lesion of altered echogenicity is seen. The peripancreatic region shows no abnormal fluid collection.

**SPLEEN:** It is normal in shape, size (10.7 cm) and shows homogeneous echopattern. No focal lesion is seen. No abnormal venous dilatation is seen in the splenic hilum.

**KIDNEYS:** Both Kidneys are normal in shape, size and position. Cortical echogenicity and thickness are normal with normal cortico-medullary differentiation in both kidneys. No calculus, hydronephrosis or mass is noted. The perinephric region shows no abnormal fluid collection.

**RIGHT KIDNEY** measures 10.6 cm      **LEFT KIDNEY** measures 10.7 cm

**URETER:** Both ureters are not dilated. No calculus is noted in either side.

**PERITONEUM & RETROPERITONEUM:** The aorta and IVC are normal. Lymph nodes are not enlarged. No free fluid is seen in peritoneum.

**URINARY BLADDER:** It is adequately distended providing optimum scanning window. The lumen is clear and wall thickness is normal. Post voiding study shows insignificant residual urine volume.

**UTERUS:** It is normal in shape, size (9.3 cm ) and echopattern. No focal myometrial lesion is seen. Endometrial echo is in midline. Double layer of endometrial echo measures appears normal . Endometrial cavity is empty. Cervix is normal.

**ADNEXA:** No adnexal SOL is noted.

**RIGHT OVARY** is normal in shape, size and echopattern.

**LEFT OVARY** is normal in shape, size and echopattern.

**POD :** No fluid is seen.

**IMPRESSION:**

**Grade I fatty liver.**
