T3 ELFA Method	1.38	ng / mL	0.60 - 1.81
T4 ELFA Method	6.96	ug / dL	4.5 - 10.9
TSH ELFA Method	2.68	uIU / mL	0.35 - 5.50

REFERENCE RANGE

PAEDIATRIC AGE GROUP

0-3 DAYS	1.0 - 20	uIU / mL
3-30 DAYS	0.5 - 6.5	uIU / mL
1 MONTH -5 MONTHS	0.5 - 6.0	uIU / mL
6 MONTHS- 18 YEARS	0.5 - 4.5	uIU / mL

<u>ADULTS</u>	0.35 - 5.50	uIU / mL
----------------------	-------------	----------

Note: TSH levels are subject to circadian variation, rising several hours before the onset of sleep, reaching peak levels between 11 pm to 6 am. Nadir concentrations are observed during the afternoon. Diurnal variation in TSH level approximates $\pm 50\%$, hence time of the day has influence on the measured serum TSH concentration.

Test Name	Value	Unit	Normal Value
-----------	-------	------	--------------

Assay performed on enhanced chemi luminescence system (Centaur-Siemens)

Serum T3, T4 & TSH measurements form the three components of Thyroid screening panel, useful in diagnosing various disorders of Thyroid gland function.

1. Primary hypothyroidism is accompanied by depressed serum T3 and T4 values and elevated serum TSH level.
2. Primary hyperthyroidism is accompanied by elevated serum T3 and T4 levels along with depressed TSH values.
3. Normal T4 levels are accompanied by increased T3 in patients with T3 thyrotoxicosis.
4. Slightly elevated T3 levels may be found in pregnancy and estrogen therapy, while depressed levels may be encountered in severe illness, renal failure and during therapy with drugs like propranolol and propyl thiouracil.
5. Although elevated TSH levels are nearly always indicative of primary hypothyroidism, and may be seen in secondary thyrotoxicosis.

SEROLOGY

TOTAL PSA 1.85 ng / mL
 ELFA

INTERPRETATION :

Expected Values :

Age (years)	PSA concentrations (ng / mL)	
	Low Limit	High Limit
< 40	0.21	1.72
40 - 49	0.27	2.19
50 - 59	0.27	3.42
60 - 69	0.22	6.16
> 69	0.21	6.77

PSA is reliable tumour marker for already diagnosed prostatic carcinomas. It is uniquely associated only with prostatic tissue, and therefore is specific for it. Baseline levels measured prior to therapeutic intervention and followed later by serial periodical measurements will predict the outcome of therapy. It also helps in early discovery of recurrences, relapses and metastases.

In general, tumor marker levels are directly proportional to the tumour mass and the stage of the cancer. However, it is the rate of change of the tumor marker level which is more important, rather than its absolute

value.

A 50% change may be considered clinically significant. It must be emphasised that PSA may also be elevated in benign prostatic hypertrophy and inflammatory conditions of the surrounding genitourinary tract. Therefore, this parameter should never be used as a screening test for diagnosing prostatic carcinomas but only as an aid in follow up studies.

DEPARTMENT OF RADIOLOGY & IMAGING**PT.NAME: MR. ASHISH JOSHI****AGE/SEX-37Y/M****UHID NO- 65940****DATE: 24/FEB/2024****REF.BY- DR. (MAJ) SAURABH MAYANK****USG WHOLE ABDOMEN**

LIVER: is normal in size, measures approx 13.6 cms and has a normal homogeneous echotexture.

PORTAL VEIN: is not dilated. Intrahepatic biliary radicals are not dilated.

GALL BLADDER: is partially distended with normal wall thickness.

CBD: is not dilated with clear lumen. No calculus is seen.

PANCREAS: Visualized part of pancreas is normal in size, shape with normal homogeneous echotexture. **MPD:** is not dilated.

SPLEEN: is normal in size (~9.6 cms) with normal homogeneous echotexture.

RIGHT KIDNEY: is normal in size and echotexture.

- Cortical echogenicity is normal.
- Cortico-medullary demarcation is maintained.
- Parenchymal thickness appears normal.
- Pelvicalyceal system is not dilated.

LEFT KIDNEY: is normal in size and echotexture.

- Cortical echogenicity is normal.
- Cortico-medullary demarcation is maintained.
- Parenchymal thickness appears normal.
- Pelvicalyceal system is not dilated.

-----PTO

www.ujalacygnus.com

URETERS:

- The upper parts of both the ureters are not dilated.
- Bilateral vesico-ureteric junctions are not dilated.

URINARY BLADDER: is partially distended.

PROSTATE: is mildly enlarged in size and volume approx 23.0 cc.

No free fluid is seen in the Morrison's pouch, perihepatic space, perisplenic space, para colic gutter and pelvic cavity.

IMPRESSION: USG appearances are suggestive of -

➤ **Grade I prostatomegaly.**
