RENAL FUNCTION TEST (RFT)

BLOOD UREA	18	12.8 - 42.8	mg /dl
BLOOD UREA NITROGEN (BUN) <i>Method : UREASE COBAS /INTEGRA 400</i>	9.0	6.0 - 21	mg/dl
SERUM CREATININE	0.79	0.5 - 1.4	mg /dl
SERUM URIC ACID <i>Method : SPECTROPHOTOMETRIC</i>	5.83	3.5 - 7.2	mg/dl

RENAL FUNCTION TESTS Healthy kidneys remove wastes and excess fluid from the blood. Blood tests show whether the kidneys are failing to remove wastes. Our kidneys help in the regulation of salts and water present in our bodies. There are millions of structures known as nephrons through which the kidneys filter the blood. Certain waste materials from the body are also passed out through the kidneys. The urine that we pass out comprises of excess waste products which are flushed into our bladder by the kidneys. A kidney function blood test helps check if the kidneys are functioning properly. The kidney blood test results tell us the level of urea and creatinine present. The test also measures the level of certain salts such as potassium, chloride, sodium, and bicarbonate. Creatinine is a waste product that comes from meat protein in the diet and also comes from the normal wear and tear on muscles of the body. Creatinine levels in the blood can vary, and each laboratory has its own normal range. In many labs the normal range is 0.7 to 1.5 mg/dl. Higher levels may be a sign that the kidneys are not working properly. As kidney disease progresses, the level of creatinine in the blood increases. Urea also is produced from the breakdown of food protein. A normal Blood Urea level is between 10 and 50 mg/dl. As kidney function decreases, the Urea level increases. Uric Acid is a blood test, also known as a serum uric acid measurement, determines how much uric acid is present in your blood. The test can help determine how well your body produces and removes uric acid. Most uric acid is dissolved in the blood, filtered through the kidneys, and expelled in the urine. Sometimes, the body produces too much uric acid or does not filter out enough of it. Hyperuricemia is the disorder that occurs when you have too much uric acid in your body. One cause of hyperuricemia is increased cell death, due to cancer or cancer treatments, can lead to an accumulation of uric acid in the body. It is also possible to have too little uric acid in your blood, which is a symptom of liver or kidney disease, or Fanconi syndrome, a disorder of the kidney tubules that prevents the absorption of substances such as glucose and uric acid, which are then passed in the urine.

LIVER FUNCTION TESTS Liver enzyme tests, formerly called liver function tests (LFTs), are a group of blood tests that detect inflammation and damage to the liver. They can also check how well the liver is working. Most often, a liver test panel is ordered as a routine lab test. Many doctors check the liver in new patients or during annual physicals examination. Your doctor may conduct liver enzyme and liver function tests if: You are taking a medication that can harm the liver You have liver disease You have symptoms of liver or bile system disease (abdominal pain, nausea and vomiting or yellow skin) You drink alcohol excessively Liver tests may be done together in a panel or tested separately. The liver filters and processes blood as it circulates through the body. It metabolizes nutrients, detoxifies harmful substances, makes blood clotting proteins, and performs many other vital functions. The cells in the liver contain proteins called enzymes that drive these chemical reactions. When liver cells are damaged or destroyed, the enzymes in the cells leak out into the blood, where they can be measured

BIOCHEMISTRY

LIPID PROFILE

SERUM TOTAL CHOLESTEROL <i>Method : Cholesterol Oxidase</i>	175		Upto 200 : Normal 200 - 239 : Borderline >240 : High	mg/dl
SERUM TRIGLYCERIDES <i>Method : Glycerol phosphate oxidase spectrophotometry</i>	151	H	Normal : <150 Borderline : 150 -199 High :200-499 Very High : > 500	mg/dL
HDL CHOLESTEROL <i>Method : Direct cholestroloxidase spectrophotometry</i>	54		Normal : Upto 35 Risk : >60	mg /dl
LDL CHOLESTEROL <i>Method : Calculated</i>	90.8		Normal : <130 Borderline : 130 -159 High : >160	mg /dl
VLDL Cholesterol <i>Method : Calculated</i>	30.2		0.0 - 40.0	mg/dl
CHOL/HDL Ratio <i>Method : Calculated</i>	3.2		Normal : 0.0 - 4.0 High : > 6.0	

Lipid Profile provide results for four different types of cholesterols. Total cholesterol LDL (low-density lipoprotein), the "bad cholesterol" HDL (high-density lipoprotein), the "good cholesterol" Triglycerides, another form of fat in the blood. Now, what do the numbers in your lipid panel mean? For total cholesterol: 200 milligrams per deciliter (mg/dL) or less is considered normal. 201 to 240 mg/dL is borderline. Greater than 240 mg/dL is considered high. For HDL ("good cholesterol"), more is better: HDL 60 mg/dL or higher is good – it protects against heart disease. HDL between 40 and 59 mg/dL are acceptable. Less than 40 mg/dL HDL is low, increasing the risk of heart disease. For LDL ("bad cholesterol"), lower is better: An LDL of less than 100 mg/dL is optimal. An LDL of 100 to 129 mg/dL is near-optimal. LDL between 130 and 159 mg/dL is borderline high. LDL cholesterol between 160 and 189 mg/dL is high. An LDL of 190 mg/dL or more is considered very high.

Dear SAGAR SAINI,

Greetings from Apollo Clinics,

Your corporate health check appointment is confirmed at MOHALI clinic on 2024-06-21 at 09:00-09:30.

Payment Mode	
Corporate Name	MARUTI SUZUKI INDIA LIMITED
Agreement Name	[MARUTI SUZUKI PMC CASH PAN INDIA OP AGREEMENT]
Package Name	[MARUTI SUZUKI - PMC BELOW 35Y - PAN INDIA - FY2324]

"Kindly carry with you relevant documents such as HR issued authorization letter and or appointment confirmation mail and or valid government ID proof and or company ID card and or voucher as per our agreement with your company or sponsor."

Note: Video recording or taking photos inside the clinic premises or during camps is not allowed and would attract legal consequences.

Note: Also once appointment is booked, based on availability of doctors at clinics tests will happen, any pending test will happen based on doctor availability and clinics will be updating the same to customers.

Instructions to be followed for a health check:

1. Please ensure you are on complete fasting for 10-To-12-Hours prior to check.
2. During fasting time do not take any kind of alcohol, cigarettes, tobacco or any other liquids (except Water) in the morning. If any medications taken, pls inform our staff before health check.
3. Please bring all your medical prescriptions and previous health medical records with you.
4. Kindly inform our staff, if you have a history of diabetes and cardiac problems.

For Women:

1. Pregnant women or those suspecting are advised not to undergo any X-Ray test.
2. It is advisable not to undergo any health check during menstrual cycle.

For further assistance, please call us on our Help Line #: 1860 500 7788.
