BLOOD SUGAR (FPL) Serum

results	unit	reference	
SUGAR FP	106.00	mg/dl	80 - 140

Comments:

Accurate measurement of glucose in body fluid is important in diagnosis and management of diabetes, hypoglycemia, adrenal dysfunction and various other conditions. High levels of serum glucose may be seen in case of diabetes mellitus, in patients receiving glucose containing fluids intravenously, during severe stress and in cerebrovascular accidents. Decreased levels of glucose can be due to insulin administration, as a result of insulinoma, inborn errors of carbohydrate metabolism or fasting.

METHOD - GOD-PHO METHOD, END POINT

DEPARTMENT OF HORMONE ASSAYS

Test Name	Result	Unit	Bio. Ref. Range	Method
		FT3		
Sample Type : Serum				
FT3	2.16	pg/ml	1.4 - 4.40	COA

COMMENTS:

- The levels of Thyroid hormones (T3, T4 & FT3, and FT4) are low in case of Primary, Secondary and Tertiary hypothyroidism and sometimes in nonthyroidal illness also. Increase levels are found in Graves's disease, Hyperthyroidism and Thyroid hormone resistance.
- TSH levels are raised in Primary hypothyroidism and are low in Hyperthyroidism and secondary hypothyroidism.
- Measurement of Free T3 has a number of well established uses. Free T3 constitutes only about 0.25% of the total T3 circulation. It is often employed to help confirm a diagnosis of hypothyroidism when an elevated free or total T4 has been encountered. Total T3 is affected by the concentration of total thyroid hormone binding protein, while free T3 on the other hand, is largely unaffected by variations in these carrier proteins. Thus T4(elevation typical of pregnancy, patients on oral contraceptives and estrogen therapy will induce an increase in the total T3 level while leaving the free T3 concentration basically unchanged.

DEPARTMENT OF HORMONE ASSAYS

Test Name	Result	Unit	Bio. Ref. Range	Method
		FREE T4		
Sample Type : Serum				
FT4	1.0	ng/dL	0.70 - 1.70	CLIA

COMMENTS:

- The levels of Thyroid hormones (T3, T4 & FT3, and FT4) are low in cases of Primary, Secondary and Tertiary Hypothyroidism and sometimes in non-thyroidal illness also. Increase levels are found in Graves's disease, Hyperthyroidism and Thyroid hormone resistance.
- TSH levels are raised in Primary hypothyroidism and are low in Hyperthyroidism and secondary hypothyroidism.
- Free thyroxine (FT4) is a better indicator of thyroid hormone action as it is not affected by changes in thyroxine binding globulin.

Laboratory Report

Test Name	Result	Unit	Bio. Ref. Range	Method
DEPARTMENT OF HORMONE ASSAYS				
TSH - THYROID STIMULATING HORMONE				
Sample Type : Serum				
TSH	7.63	uIU/ml	0.35 - 5.50	CIA

Interpretation:

1. Serum T3, T4 and TSH are the measurements form three components of thyroid screening panel and are useful in diagnosing various disorders of thyroid gland function.
2. Primary hyperthyroidism is accompanied by elevated serum T3 and T4 values along with depressed TSH levels.
3. Primary hypothyroidism is accompanied by depressed serum T3 and T4 values and elevated serum TSH levels.
4. Normal T4 levels accompanied by high T3 levels are seen in patients with T3 thyrotoxicosis. Slightly elevated T3 levels may be found in pregnancy and in estrogen therapy while depressed levels may be encountered in severe illness, malnutrition, renal failure and during therapy with drugs like propranolol and propylthiouracil.
5. Although elevated TSH levels are nearly always indicative of primary hypothyroidism, rarely they can result from TSH secreting pituitary tumours (secondary hyperthyroidism).
6. Low levels of Thyroid hormones (T3, T4 & FT3, FT4) are seen in cases of primary, secondary and tertiary hypothyroidism and sometimes in non-thyroidal illness also.
7. Increased levels are found in Grave's disease, hyperthyroidism and thyroid hormone resistance.
8. TSH levels are raised in primary hypothyroidism and are low in hyperthyroidism and secondary hypothyroidism.

REFERENCE RANGE : (References range recommended by the American Thyroid Association)

PREGNANCY	TSH in uIU/ml	Age	TSH in uIU/ml
1st Trimester	0.60 - 3.40	0 - 4 Days	1.00 - 39.00
2nd Trimester	0.37 - 3.60	2 Weeks to 5 Months	1.70 - 9.10
3rd Trimester	0.38 - 4.04	6 Months to 20 Yrs.	0.70 - 6.40
		>55 Yrs.	0.50 - 8.00

1. During pregnancy, Free thyroid profile (FT3, FT4 & Ultra-TSH) is recommended.
2. TSH levels are subject to circadian variation, reaches peak levels between 2-4 AM and at a minimum between 6-10 PM. The variation of the day has influence on the measured serum TSH concentrations.
