Investigation	Value	Units	Biological Ref Interval
---------------	-------	-------	-------------------------

REMARKS In vitro quantitative determination of HbA1c in whole blood is utilized in long term monitoring of glycemia. The HbA1c level correlates with the mean glucose concentration prevailing in the course of the patient's recent history (approx - 6-8 weeks) and therefore provides much more reliable information for glycemia monitoring than do determinations of blood glucose or urinary glucose. It is recommended that the determination of HbA1c be performed at intervals of 4-6 weeks during Diabetes Mellitus therapy. Results of HbA1c should be assessed in conjunction with the patient's medical history, clinical examinations and other findings.

REFERENCE RANGE (HbA1c) :
 GOOD CONTROL 4.5-6.4%
 FAIR CONTRIOL 6.5-7.4%
 POOR CONTROL ABOVE -7.5%

THYROID PANEL BY CHEMILUMINESCENCE, SERUM

Primary malfunction of the thyroid gland may result in excessive (hyper) or below normal (hypo) release of T3 and T4 in addition, as TSH directly affects thyroid function, malfunction of the pituitary or the hypothalamus influences of the thyroid gland activity, Disease in any portion of the thyroid-pituitary-hypothalamus system may influence the level of T3 and T4 in the blood. In primary hypothyroidism, TSH levels are significantly elevated, while in secondary and tertiary hypothyroidism, TSH levels may be low, in addition, in the Euthyroid Sick Syndrome, multiple alterations in serum thyroid function test findings have been recognized in the patients with a wide variety of non thyroidal illness (NTI) without evidence of preexisting thyroid or hypothalamic - pituitary

NAME: MR. MOHIT SHARMA S/o ADITYA SHARMA	AGE: 29 YRS ,MALE	DATE : 27.01.2024
PATIENT ID: 81	REFERRED BY: DR SURENDER GAUR (GLOBAL HOSPITAL)	

ULTRASOUND WHOLE ABDOMEN

Suboptimal window due to excessive bowel gases.

LIVER

Is normal in size, normal in outline & show **grade I fatty changes**. No focal lesion is seen. Portal vein & hepatic veins are normal. Intra hepatic biliary radicals are not dilated.

GALL BLADDER

Is normally distended. **2 small isoechoic foci are seen along the walls, larger of size ~3.5 mm, likely sludge balls/polyp. Follow up is advised.** Walls are normal. No pericholecystic fluid is seen. Proximal CBD is normal. Distal CBD is obscured by overlapping bowel gases.

PANCREAS:

Is obscured.

SPLEEN:

Is normal in size, outline & echotexture. No focal lesion is seen.

RIGHT KIDNEY: is normal in size, outline & echotexture. Cortico-medullary differentiation is well maintained. There is no evidence of hydronephrosis or mass. **A concretion of size ~2.0 mm is seen in the lower polar calyx.**

LEFT KIDNEY: is normal in size, outline & echotexture. Cortico-medullary differentiation is well maintained. There is no evidence of hydronephrosis, calculus or mass.

URINARY BLADDER:

Is partially distended. Visualized lumen is clear.

PROSTATE:

Visualized prostate appears grossly normal in size, normal in outline & appears grossly normal in echopattern.

No free fluid/lymphadenopathy seen in peritoneal cavity.

Large bowel loop is fecal matter loaded.

Rests of the bowel loops are unremarkable in present scan on USG.

IMPRESSION:

- **Grade I fatty liver.**
- **GB sludge balls/polyp. Follow up is advised.**
- **Right renal non-obstructive concretion.**

Please correlate clinically.

(Note: Sonography has its limitations and the result should be correlated with clinical and other relevant patient data. Sonography is limited in delineating GIT lesions)
(The sensitivity and specificity of ultrasound for detection of small renal calculi is low. NCCT KUB may be considered for better evaluation, if clinically indicated)

END OF REPORT

DR. ROHIT BHARDWAJ

ECHOCARDIOGRAPHY REPORT

NAME: - Mr. MOHIT SHARMA

AGE 29/SEX: MALE

DATE:- 27.01.2024

ECHOCARDIOGRAPHY AND COLOUR DOPPLER FINDINGS:

- Mitral valve is normal. Aortic root is Normal. LA is normal. LV is normal. No RWMA LVEF 60% PA is normal. RV is normal. RA is normal. No pericardial effusion seen.

COLOUR FLOW MAPPING:

- Trace MR
- Trace AR
- Trace TR

DOPPLER STRUDIES

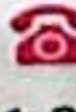

- E > A
- Aortic flow velocity = 1.8 M/S
- Pulmonary flow velocity = 1.2 M/S

FINAL REPORT

- No RWMA
- Trace MR, Trace AR & TR ,RVSP= 28 MMHG
- No LVDD
- No Clot/ Pericardial effusion seen.
- LVEF 60%
